Predicting the counter-intuitive stress relaxation behavior of glass forming materials

Jamie M. Kropka, Kevin N. Long

PII: S0032-3861(18)30353-7

DOI: [10.1016/j.polymer.2018.04.050](https://doi.org/10.1016/j.polymer.2018.04.050)

Reference: JPOL 20530

To appear in: *Polymer*

Received Date: 16 February 2018

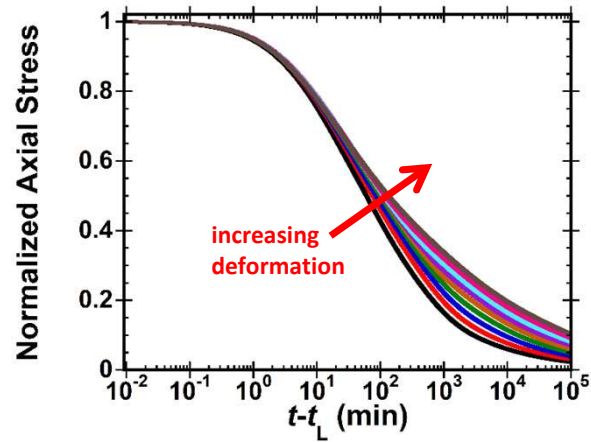

Revised Date: 16 April 2018

Accepted Date: 19 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

“mobility decrease with increased deformation”
at **LOW** strain rates

“mobility increase with increased deformation”
at sufficiently **HIGH** strain rates
