A multistep methodology based on developed Takayanagi, Paul and Ouali models for tensile modulus of polymer/carbon nanotubes nanocomposites above percolation threshold assuming the contribution of interphase regions

Navid Jamalzadeh, Sahar Heidary, Yasser Zare, Kyong Yop Rhee

PII: S0142-9418(18)30166-1

DOI: [10.1016/j.polymertesting.2018.05.001](https://doi.org/10.1016/j.polymertesting.2018.05.001)

Reference: POTE 5448

To appear in: *Polymer Testing*

Received Date: 28 January 2018

Revised Date: 30 April 2018

Accepted Date: 2 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

A multistep methodology based on developed Takayanagi, Paul and Ouali models for tensile modulus of polymer/carbon nanotubes nanocomposites above percolation threshold assuming the contribution of interphase regions
