Doped rare and transition metal perovskite-type titanate nanoparticles: A new method for developing synthesizing and photocatalytic ability

Yahya Absalan, Irena G. Bratchikova, Olga V. Kovalchukova

PII: S0167-7322(18)33007-1
DOI: doi:[10.1016/j.molliq.2018.07.100](https://doi.org/10.1016/j.molliq.2018.07.100)
Reference: MOLLIQ 9421
To appear in: *Journal of Molecular Liquids*
Received date: 10 June 2018
Revised date: 17 July 2018
Accepted date: 25 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Doped rare and transition metal perovskite-type titanate nanoparticles: A new method for developing synthesizing and Photocatalytic ability
