Prediction of surface tension of highly nonideal aqueous-organic mixtures as a function of composition by a partitioning model between surface and bulk phases and use of partial molar surface areas

Sunil Nath

PII: S0167-7322(18)30805-5
DOI: [doi:10.1016/j.molliq.2018.04.081](https://doi.org/10.1016/j.molliq.2018.04.081)
Reference: MOLLIQ 8984
To appear in: *Journal of Molecular Liquids*
Received date: 13 February 2018
Revised date: 11 April 2018
Accepted date: 16 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Prediction of Surface Tension of Highly Nonideal Aqueous-Organic Mixtures as a Function of Composition by a Partitioning Model between Surface and Bulk Phases and Use of Partial Molar Surface Areas

Sunil Nath

*Department of Biochemical Engineering and Biotechnology, Indian Institute of Technology
Delhi, Hauz Khas, New Delhi 110 016, India*

Short Running Title: Surface Tension of Aqueous-Organic Mixtures

Keywords: Surface tension; solution; nonideal; composition; thermodynamics; adsorption; partitioning; partial molar surface area; activity coefficient; excess surface tension; Butler equation
