This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A generalized theory is derived for thin film growth with an arbitrary incidence angle during physical vapor deposition.
- Critical conditions are established for transition from thin film growth to nanorod growth.
- Phase diagram established with domains for thin film growth and nanorod growth.
