This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Energy levels and transition parameters for the electric dipole transitions in C I and O III are studied by the Rayleigh-Ritz variation method with moderate-scale multi-configurations wavefunctions.
- The present calculated energy levels are in fair agreement with the NIST experimental data.
- Transition parameters for 5 electric dipole transitions in C I and O III are new reported, and uncertainties for 19 electric dipole transitions in C I and O III are improved.
