Scattering by multiple cylinders located on both sides of an interface

Siu -Chun Lee

PII: S0022-4073(17)30813-0
DOI: [10.1016/j.jqsrt.2018.04.010](https://doi.org/10.1016/j.jqsrt.2018.04.010)
Reference: JQSRT 6056

To appear in: *Journal of Quantitative Spectroscopy & Radiative Transfer*

Received date: 26 October 2017
Revised date: 27 March 2018
Accepted date: 7 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Developed a general solution for scattering by cylinders located in front of and buried in a semi-infinite medium, as well as located in both half spaces.
- Accounted for near-field scattering, surface interaction, coupling between both half spaces, and irradiation by propagating and evanescent wave.
- Derived formulas for the EM fields and Poynting vector in the far-field.
- Illustrated the frustration of total internal reflection and scattering of light beyond the critical angle.
