This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We study electromagnetic scattering by spherical particles immersed in an unbounded absorbing medium.
- A first-principles approach allows for the calculation of relevant far-field optical observables.
- Effects of host absorption and particle polydispersity on the extinction efficiency and scattering matrix are identified.
