Extended calculations of energy levels, radiative properties, A_J , B_J hyperfine interaction constants, and Landé g_J -factors for nitrogen-like Ge XXVI

K. Wang, C.Y. Zhang, P. Jönsson, R. Si, X.H. Zhao, Z.B. Chen, X.L. Guo, C.Y. Chen, J. Yan

PII: S0022-4073(17)30712-4
DOI: [10.1016/j.jqsrt.2018.01.014](https://doi.org/10.1016/j.jqsrt.2018.01.014)
Reference: JQSRT 5960

To appear in: *Journal of Quantitative Spectroscopy & Radiative Transfer*

Received date: 16 September 2017
Revised date: 9 January 2018
Accepted date: 10 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Energies, transition rates, hyperfine interaction constants, and Land gJ-factors of the lowest 272 levels in Ge XXVI are provided.
- The MCDHF and MBPT methods are employed.
- The most accurate and complete atomic data in Ge XXVI are provided to date.
