Modeling light scattering in the shadow region behind thin cylinders
for diameter analysis

Werner Blohm

PII: S0022-4073(17)30492-2
DOI: [10.1016/j.jqsrt.2017.12.016](https://doi.org/10.1016/j.jqsrt.2017.12.016)
Reference: JQSRT 5932

To appear in: *Journal of Quantitative Spectroscopy & Radiative Transfer*

Received date: 15 June 2017
Revised date: 17 December 2017
Accepted date: 18 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Modeling light scattering of circular cylinders
- Sinusoidal model functions for data inversion
- Novel evaluation algorithm for retrieving diameter information of cylindrical products like thin wires or optical fibers
- Test results with synthetic and experimental scattering data
