Laboratory spectroscopy of meteorite samples at UV-Vis-NIR wavelengths: Analysis and discrimination by principal components analysis

Antti Penttilä, Julia Martikainen, Maria Gritsevich, Karri Muinonen

PII: S0022-4073(17)30719-7
DOI: [10.1016/j.jqsrt.2017.11.011](https://doi.org/10.1016/j.jqsrt.2017.11.011)
Reference: JQSRT 5902

To appear in: *Journal of Quantitative Spectroscopy & Radiative Transfer*

Received date: 21 September 2017
Revised date: 13 November 2017
Accepted date: 13 November 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Meteorite samples are measured with the University of Helsinki integrating-sphere UV-Vis-NIR spectrometer.
- The spectral measurements are transformed with the principal component analysis.
- Different meteorite types can be distinguished from the transformed data
