This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Graphical Abstract

Stable and large superelasticity and elastocaloric effect in nanocrystalline Ti-44Ni-5Cu-1Al (at%) alloy

Ti-44Ni-5Cu-1Al (at%)

Hot rolling at 1123 K

Cold rolling at RT

Annealing at 673K/5min

Nano-sized fine B2-phase grain

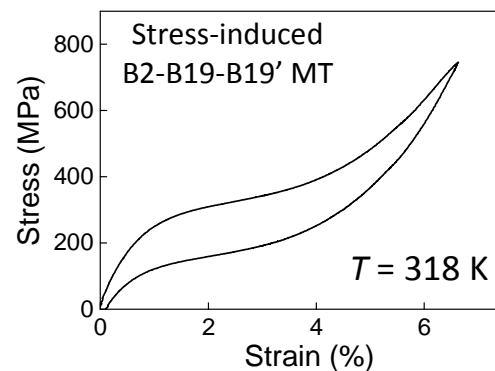

Narrow hysteresis

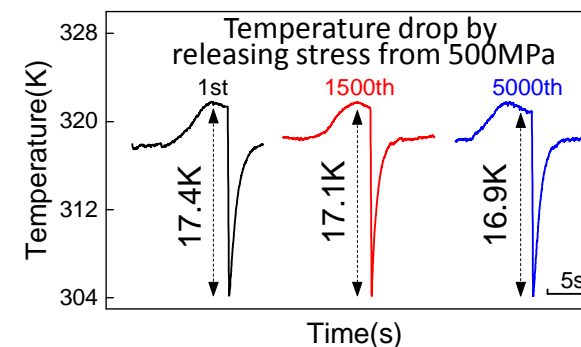

Stable superelasticity

Large reversible strain

Stable elastocaloric effect
