Role of soluble aluminum species in the activating solution for synthesis of silico-aluminophosphate geopolymers

Yan-Shuai Wang, John L. Provis, Jian-Guo Dai

PII: S0958-9465(18)30521-3

DOI: [10.1016/j.cemconcomp.2018.07.011](https://doi.org/10.1016/j.cemconcomp.2018.07.011)

Reference: CECO 3102

To appear in: *Cement and Concrete Composites*

Received Date: 20 May 2018

Revised Date: 10 July 2018

Accepted Date: 19 July 2018

Please cite this article as: Y.-S. Wang, J.L. Provis, J.-G. Dai, Role of soluble aluminum species in the activating solution for synthesis of silico-aluminophosphate geopolymers, *Cement and Concrete Composites* (2018), doi: 10.1016/j.cemconcomp.2018.07.011.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Role of soluble aluminum species in the activating solution for synthesis of silico-aluminophosphate geopolymers

Yan-Shuai Wang¹, John L. Provis^{2*} and Jian-Guo Dai^{3*}

¹ PhD Candidate, Department of Civil and Environmental Engineering, The Hong Kong Polytechnic University, Hong Kong, China

² Professor, Department of Materials Science and Engineering, University of Sheffield, Sir Robert Hadfield Building, Portobello Street, Sheffield, UK. Corresponding author: j.provis@sheffield.au.uk
