Carbon-driven synthesis of bi-plasmonic Ag-Cu nanocomposite phosphate glasses

José A. Jiménez

PII: S0254-0584(17)30936-7

DOI: 10.1016/j.matchemphys.2017.11.057

Reference: MAC 20177

To appear in: *Materials Chemistry and Physics*

Received Date: 20 June 2017

Accepted Date: 27 November 2017

Please cite this article as: José A. Jiménez, Carbon-driven synthesis of bi-plasmonic Ag-Cu nanocomposite phosphate glasses, *Materials Chemistry and Physics* (2017), doi: 10.1016/j.matchemphys.2017.11.057

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Bi-metallic nanocomposite glasses synthesized *via* graphite
- Optical absorption and luminescent properties evaluated
- Extended bi-plasmonic absorption developed
