One-Step Nonlinear Electrochemical Synthesis of $\text{Te}_x\text{S}_y@$ PANI Nanorod Materials for Li- Te_xS_y Battery

Jun Li, Yifei Yuan, Huile Jin, Huihang Lu, Aili Liu, Dewu Yin, Jichang Wang, Jun Lu, Shun Wang

PII: S2405-8297(18)30402-1
DOI: <https://doi.org/10.1016/j.ensm.2018.04.019>
Reference: ENSM371

To appear in: *Energy Storage Materials*

Received date: 5 April 2018
Revised date: 16 April 2018
Accepted date: 17 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting galley proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Author Contributions

S.W., J.W., and J. Lu designed the experiments. J. Li and H. L. performed the material synthesis, characterization and battery tests. J. Li analyzed the data and drafted the manuscript. Y.Y. performed the in-situ TEM measurements and made the major revision. All authors participated in discussions.

Notes

The authors declare no competing financial interest.

ACKNOWLEDGMENTS

We are grateful for financial support from the National Natural Science Foundation of China (51772219, 51641210, 21471116, 21601138), the Zhejiang Provincial Natural Science Foundation of China (LY17E020002, LZ15E020002 and LY17E020003). J. Lu gratefully acknowledges support from the U. S. Department of Energy (DOE), Office of Energy Efficiency and Renewable Energy, Vehicle Technologies Office. Argonne National Laboratory is operated for DOE Office of Science by UChicago
