**Keywords**: anode materials, initial Coulombic efficiency, nanostructures, tin dioxide @carbon composites

#### **Abstract**

Recently, many exciting achievements have been made in improving the cycling performance of SnO<sub>2</sub>-based electrode. However, the low initial Coulombic efficiency of SnO<sub>2</sub>-based electrode caused by the formation of solid electrolyte interphase and some of the irreversible formation of Li<sub>2</sub>O in SnO<sub>2</sub> structure still remains unresolved.
