Low-energy electron-beam modification of DLC coatings reduces cell count while maintaining biocompatibility

G. Gotzmann, J. Beckmann, B. Scholz, U. Herrmann, C. Wetzel

PII: S0257-8972(17)30910-6
DOI: doi: [10.1016/j.surfcoat.2017.09.024](https://doi.org/10.1016/j.surfcoat.2017.09.024)
Reference: SCT 22662
To appear in: *Surface & Coatings Technology*
Received date: 15 May 2017
Revised date: 23 August 2017
Accepted date: 10 September 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Low-energy electron-beam modification of DLC coatings reduces cell count while maintaining biocompatibility
