Application of the pattern matching approach for EBSD calibration and orientation mapping, utilising dynamical EBSD simulations

T. Friedrich, A. Bochmann, J. Dinger, S. Teichert

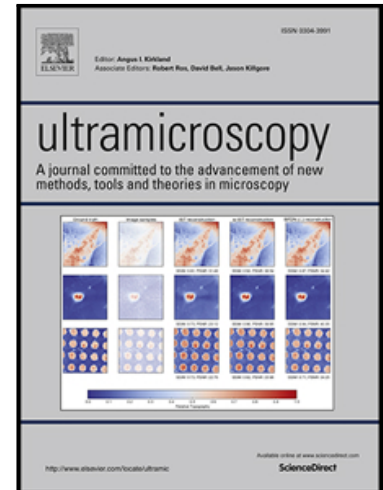

PII: S0304-3991(17)30233-4
DOI: [10.1016/j.ultramic.2017.10.006](https://doi.org/10.1016/j.ultramic.2017.10.006)
Reference: ULTRAM 12470

To appear in: *Ultramicroscopy*

Received date: 15 May 2017
Revised date: 5 October 2017
Accepted date: 10 October 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Angular resolution for EBSD orientation determination of 0.06° was reached using pattern matching approach with dynamical simulated patterns
- Increased calibration accuracy of large EBSD maps realized by calculating calibration models based on pattern matching results
- Cross-correlation values between EBSD patterns and dynamical simulated patterns were mapped to depict the specimen surface, grain boundaries and lattice distortions
- Local drops of cross-correlation values were linked to orientation gradients
