

## Accepted Manuscript

Fractional Order Attitude Stability Control for Sub-satellite of Tethered Satellite System during Deployment

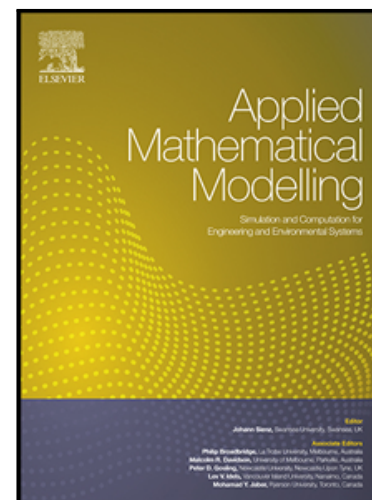

GOU Xing-wang , LI Ai-jun , GE Yang-yang , WANG Chang-qing

PII: S0307-904X(18)30177-X  
DOI: [10.1016/j.apm.2018.04.005](https://doi.org/10.1016/j.apm.2018.04.005)  
Reference: APM 12244

To appear in: *Applied Mathematical Modelling*

Received date: 11 April 2017  
Revised date: 26 March 2018  
Accepted date: 5 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights:**

- A dynamic model of sub-satellite motion is established based on Euler equation.
- The stability characteristics of attitude motion with dissymmetric junction points in the tether deployment phase are proposed.
- A feedback linearization method is used to linearize the sub-satellite attitude dynamic model.
- The fractional-order controller is designed to stably control the sub-satellite attitude.
