This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- A boundary-only singular boundary method is proposed for inhomogeneous problems.
- The method unifies the MRM and SBM.
- The boundary-only merit decreases the quantity of preparing data.
- The simple formulas of the origin intensity factors are derived for high-order fundamental solutions.
- The MRM-SBM performs well in problems with corner singularities.
