This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Theorem and corollaries are derived for generalized interval eigenvalue problems.
- An effective way to discriminate the sign invariance of eigenvector is presented.
- The analytical model solves the exact bounds of eigenvalue with high efficiency.
- Inapplicability of existing methods and superiority of proposed model are revealed.
