This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Dynamic analysis of a 2DFGM finite length rotating cylinder subjected to a moving mechanical and thermal load
- Wave propagation problem considering Initial stresses due to temperature distribution and rotational velocity
- Investigation of the effects of temperature on the stresses as well as internal moving pressure or rotational speed.
- Meshless method as a very effective method with high accuracy for propagation and dynamic analysis of 2D-FGMs.
