This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Development of reduced FE models with 3D capabilities for coupled thermoelasticity in disks.
- The models are quite efficient with very high rate of convergence.
- Study of the thermoelastic waves propagation and the Poisson effect in an axisymmetric and asymmetric disk.
