Single-machine Scheduling with Learning Effect and Resource-dependent Processing Times in the Serial-batching Production

Jun Pei , Xinbao Liu , Baoyu Liao , Panos M. Pardalos , Min Kong

PII: S0307-904X(17)30466-3
DOI: [10.1016/j.apm.2017.07.028](https://doi.org/10.1016/j.apm.2017.07.028)
Reference: APM 11878

To appear in: *Applied Mathematical Modelling*

Received date: 16 February 2017
Revised date: 7 July 2017
Accepted date: 18 July 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Under the given resource allocation, the structural properties on job batching policies and batching sequencing are proposed.
- An optimal batching policy is derived for the special case.
- An effective hybrid GSA-TS algorithm is developed to solve the studied problem.
