This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Model uncertainty is incorporated in investment and dividend problem of an insurer
- Insurer's control problem is formulated as forward-backward insurer-market games
- Insurer-market games are generalized to regular-singular forward-backward games
- Maximum principles are derived for regular-singular forward-backward games
