Analysis of the BMAP/PH/N Queueing System with Backup Servers

V.I. Klimenok, A.N. Dudin, K.E. Samouylov

PII: S0307-904X(17)30755-2  
DOI: [10.1016/j.apm.2017.12.024](https://doi.org/10.1016/j.apm.2017.12.024)  
Reference: APM 12105

To appear in: *Applied Mathematical Modelling*

Received date: 1 February 2017  
Revised date: 7 December 2017  
Accepted date: 11 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A multi-server queue with help of backup servers in case of long service is introduced.
- Constructive ergodicity condition is obtained.
- Various performance measures of the system are computed.
- Numerical results giving insight into the system behavior are presented.
