Estimation of parameters in the self-exciting threshold autoregressive processes for nonlinear time series of counts

Kai Yang, Han Li, Dehui Wang

PII: S0307-904X(18)30015-5  
DOI: [10.1016/j.apm.2018.01.003](https://doi.org/10.1016/j.apm.2018.01.003)  
Reference: APM 12119

To appear in: *Applied Mathematical Modelling*

Received date: 7 July 2017  
Revised date: 13 December 2017  
Accepted date: 8 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Redefined the SETINAR(2,1) model under a weaker condition.
- The first time using nonparametric method to estimate integer-valued threshold model and to test the model parameters.
- Provide an estimation method to quickly estimate threshold value for integer-valued threshold models.
