This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A strict upper bound of the time-discretization error for linear second-order systems is obtained;
- Upper and lower bounds on quantities of interest are also obtained by dual analysis;
- The bounds on quantities of interest are further improved through an optimization procedure;
- Numerical examples show good verification of the bounds;
- The upper bound of the time-discretization error is well applicable to adaptive time-stepping.
