This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- We focus on solving fully fuzzy linear fractional linear programming (FFLFP) problems.
- We show that there is an error in the existing method for solving FFLFP problems.
- The existing method does not obtain the correct membership function of objective function.
- We present a counterexample that shows the existing method will not always lead to a non-negative fuzzy optimal solution.
- We modify the existing method to find the non-negative fuzzy optimal solution of the FFLFP problem under consideration
