This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An efficient hybrid method based on the GA, PSO and SOS algorithms
- The proposed method improves the natural selection process in GA by using the PSO and SOS
- The experiment based on the data clustering and benchmark function shows the better performance of the proposed method.
