This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- DFIFs overcomes the deficiency of FIFs that cannot calculate a specified point's missing value.
- FIFs, an iterative function, is redesigned to a model (DFIFs) with parameters.
- Parameters of DFIFs are obtained using the cuckoo search algorithm.
- Three winners among CS-DFIFs and 3 interpolation models are combined.
- CS-DFIFs-WC outperforms benchmarks in 2 databases with 7 missing levels by 4 criteria.
