An Artificial Immune-Memory Model Based on Idiotypic Immune Networks: Perspectives on Antibody Dynamics

Chung-Ming Ou

PII: S0307-904X(16)30392-4
DOI: [10.1016/j.apm.2016.07.011](https://doi.org/10.1016/j.apm.2016.07.011)
Reference: APM 11273

To appear in: *Applied Mathematical Modelling*

Received date: 24 September 2015
Revised date: 10 July 2016
Accepted date: 13 July 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Immune memory mechanism formed by antibody chain
- Antibody dynamics defined by cross-correlation matrix
- Overlapping difference function defined by antibody dynamics
- Associativity of immune memory based on overlapping difference function
- Four types of immune memory recalls: classification for associative memory
