This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A CFD absorber model linking flow hydrodynamics with CO₂ absorption was proposed
- Good correspondence between the model and a reference lab installation was found
- A parametric study of the absorber was performed, showing its performance
- Capture efficiency is slightly influenced by varying CO₂ content in flue gases
