This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

1. Dynamic equations of space robot in operational space were derived.
2. Elementary functions were used to delineate the target's detumbling path.
3. A coordination control scheme was implemented both for base and end-effector.
4. Target mass properties were estimated during detumbling process.
