Innovative hybrid models for forecasting time series applied in wind generation based on the combination of time series models with artificial neural networks

Henrique do Nascimento Camelo, Paulo Sérgio Lucio, João Bosco Verçosa Leal Junior, Paulo Cesar Marques de Carvalho, Daniel von Glehn dos Santos

PII: S0360-5442(18)30486-9
DOI: 10.1016/j.energy.2018.03.077
Reference: EGY 12535
To appear in: *Energy*
Received Date: 23 December 2017
Revised Date: 08 February 2018
Accepted Date: 14 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Innovative hybrid models for forecasting time series applied in wind generation based on the combination of time series models with artificial neural networks
