This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Thermoeconomic analysis and optimization of a re-compression supercritical CO₂ cycle.

Adaptation of a gas turbine cycle as a model to an existing power plant.

Generation of additional power from the exhaust gas in Gaziantep MSW Power Plant.
