Profitability analysis of power generation using waste heat of sponge iron process

Gajendra K. Gaurav, Shabina Khanam

PII: S0360-5442(17)31578-5
DOI: 10.1016/j.energy.2017.09.053
Reference: EGY 11547
To appear in: *Energy*
Received Date: 14 November 2016
Revised Date: 09 August 2017
Accepted Date: 15 September 2017

Please cite this article as: Gajendra K. Gaurav, Shabina Khanam, Profitability analysis of power generation using waste heat of sponge iron process, *Energy* (2017), doi: 10.1016/j.energy.2017.09.053

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Nomenclature

C	specific heat, (J/kgK)
D	diameter of kiln, m
G	gas
h	heat transfer coefficient, kJ/h m ²
L	length of kiln, m
m	mass flow rate, kg/h
Q	Heat Load, kW
S	solid
T	temperature
t	tonne (=1000 kg)
NHV	net heating value, kJ/kg
CC	capital cost, Rupees
PI	Process Integration
T _{pa}	Primary air temperature
T _d	Kiln air
T _{sc}	Secondary air temperature
t _p	Reaction temperature
t _a	Ambient temperature
Subscript	
a	air
c	coal
m	moisture
p	process
h _u	hot utility
s	ore, supply
t	target
r	radiation
loss	loss from kiln
i	inlet to kiln
pa	Primary air temperature
