This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

15
16 **Highlights**

- 17 ➤ A novel pathway of sludge treatment is successfully designed by flow fuel cell
- 18 ➤ The power output reaches 50 mW/cm² which is over 100 times than that of MFC
- 19 ➤ The mechanisms are completely different from any reported sludge fuel cell
- 20 ➤ Low-cost and stable POM is used as both the catalyst and charge carrier
- 21 ➤ No complicated pretreatment or purification of sludge is needed
