Integrated carbon nanospheres arrays as anode materials for boosted sodium ion storage

Wangjia Tang, Jianbo Wu, Xiuli Wang, Xinhui Xia, Jiangping Tu

PII: S2468-0257(17)30116-4

DOI: [10.1016/j.gee.2017.08.001](https://doi.org/10.1016/j.gee.2017.08.001)

Reference: GEE 80

To appear in: *Green Energy and Environment*

Received Date: 5 July 2017

Revised Date: 10 August 2017

Accepted Date: 10 August 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Self-supported carbon nanospheres are prepared by a facile hydrothermal method and demonstrated with good sodium ion storage performance
