This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Pig manure management systems are evaluated by the BATNEEC method.
- Evaluated variants are storage, use in fertilization, and processing by filtration.
- Filtration scored the highest rating.
- A complex management system including elimination of manure storage is proposed.
- The system provides fertilization and production of fertilizers from separated solid phase.
