Retained Water Content after Nitrogen Driving Water on Flooding Saturated High Volatile Bituminous Coal Using Low-Field Nuclear Magnetic Resonance

Xin Li, Xuehai Fu, P.G. Ranjith, Yong Fang

PII: S1875-5100(18)30321-4

DOI: [10.1016/j.jngse.2018.07.010](https://doi.org/10.1016/j.jngse.2018.07.010)

Reference: JNGSE 2655

To appear in: *Journal of Natural Gas Science and Engineering*

Received Date: 23 February 2018

Revised Date: 17 June 2018

Accepted Date: 11 July 2018

Please cite this article as: Li, X., Fu, X., Ranjith, P.G., Fang, Y., Retained Water Content after Nitrogen Driving Water on Flooding Saturated High Volatile Bituminous Coal Using Low-Field Nuclear Magnetic Resonance, *Journal of Natural Gas Science & Engineering* (2018), doi: 10.1016/j.jngse.2018.07.010.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
