Photometric observations of ecliptic comet 47P/Ashbrook-Jackson and selected quasi-Hilda and main-belt comets at Kyiv Comet Station (MPC code – 585) in 2017

Serhii Borysenko , Alexander Baransky , Elena Musiichuk

PII: S0019-1035(18)30102-7
DOI: [10.1016/j.icarus.2018.07.003](https://doi.org/10.1016/j.icarus.2018.07.003)
Reference: YICAR 12950

To appear in: *Icarus*

Received date: 18 February 2018
Revised date: 15 June 2018
Accepted date: 5 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- R and V filters are used to photometry of comets for different dynamical groups
- We find an upper limit of radii and $Af\rho$ parameters for observed comets
- Activity for MBC P/2017 S5 is compared with quasi-Hilda and Jupiter family comets
