Characterization of Lunar Surface within Tsiolkovsky Crater: Photometric Properties

Deborah Domingue , Eric Palmer , Robert Gaskell , Matt Staid

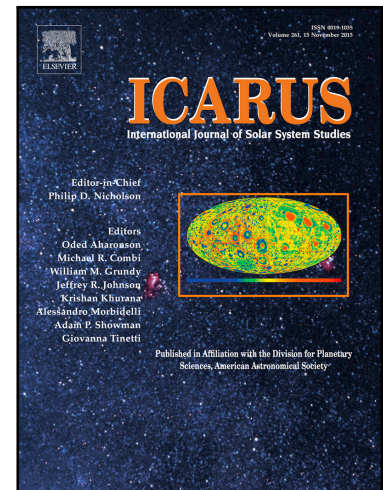

PII: S0019-1035(17)30462-1
DOI: [10.1016/j.icarus.2018.02.034](https://doi.org/10.1016/j.icarus.2018.02.034)
Reference: YICAR 12841

To appear in: *Icarus*

Received date: 22 June 2017
Revised date: 27 January 2018
Accepted date: 5 February 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HighLights

- The use of stereophotoclinometry (SPC) to provide viewing and illumination geometries for high spatial resolution photometric studies.
- Examination of the photometric properties across a portion of Tsiolkovsky crater at
- high spatial resolution
- Examination of variations in regolith structure across a region of Tsiolkovsky crater.
