This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Sheet deposits in Hellas Planitia are likely mass wastings of water-related origin.
- Sheet deposits may be the earliest deposits in the development of outflow channels.
- Unique conic lineations on top of the sheet deposits support a fluvial origin.
