Globally exponential multiswitching-combination synchronization control of chaotic systems for secure communications

Israr Ahmad , Muhammad Shafiq , M. Mossa Al-Sawalha

PII: S0577-9073(17)31359-X
DOI: [10.1016/j.cjph.2018.03.011](https://doi.org/10.1016/j.cjph.2018.03.011)
Reference: CJPH 471

To appear in: *Chinese Journal of Physics*

Received date: 23 October 2017
Revised date: 20 February 2018
Accepted date: 20 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This work establishes global exponential multiswitching combination synchronization (GEMSCS) of chaotic systems.
- A time efficient nonlinear feedback controller is designed.
- The proposed work enhances the security and complexity of the communication channel.
- The GEMSCS accomplishes fast and oscillation free converges of the error signals to the zero state.
