Resonant tunneling properties of inverted Morse double quantum barrier

Mehmet Batı

PII: S0577-9073(17)31520-4
DOI: [10.1016/j.cjph.2018.01.013](https://doi.org/10.1016/j.cjph.2018.01.013)
Reference: CJPH 443

To appear in: *Chinese Journal of Physics*

Received date: 23 November 2017
Revised date: 15 January 2018
Accepted date: 19 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The resonant energy level is changed to vary widths parameter and heights of the barriers.
- Electric field bias affects the transmission coefficient resonant peak.
- Results reveal a strong dependence in electronic transport on the structure parameters.
- Electronic transport can be controlled by structure parameters.
