Study the Effect of Acetic Acid on Structural, Optical and Mechanical Properties of PVA/Chitosan/MWCNT Films

Maryam Abdolrahimi , Majid Seifi ,
Mohammad Hassan Ramezan Zadeh

PII: S0577-9073(17)30846-8
DOI: [10.1016/j.cjph.2017.12.018](https://doi.org/10.1016/j.cjph.2017.12.018)
Reference: CJPH 420

To appear in: *Chinese Journal of Physics*

Received date: 8 July 2017
Revised date: 17 December 2017
Accepted date: 20 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Increasing acid concentration enhances the crystallinity of the PVA/chitosan films.
- Increasing acid concentration decreased toughness and ultimate tensile strength.
- Engineering analyses show that the films reinforced by MWCNT.
