This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An equivalent electrical circuit is represented for response of a HTS system for arbitrary current ramp.
- The magnetic hysteresis loop for the ramp up-down current is obtained.
- In this model the behavior of the voltage versus current is in good agreement with considered theory.
