Geometrically tunable slow light based on a modified photonic crystal waveguide

Mouhssin Maache , Abdesselam Hocini , Djamel Khedrouche

PII: S0577-9073(17)30803-1
DOI: [10.1016/j.cjph.2017.09.015](https://doi.org/10.1016/j.cjph.2017.09.015)
Reference: CJPH 359

To appear in: *Chinese Journal of Physics*

Received date: 28 June 2017
Revised date: 26 September 2017
Accepted date: 27 September 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A modified waveguide exhibits both wideband and low group velocity dispersion.
- Shifting the second rows of air holes improves the performance of the structure.
- The proposed design offers great potential for integrated optics and sensor use.
