Zeno effect in quantum Newton's cradle

C.M. Barros Hito, M.B.E. Silva, A.R. Bosco de Magalhães

PII: S0375-9601(18)30105-1
DOI: <https://doi.org/10.1016/j.physleta.2018.01.033>
Reference: PLA 24941

To appear in: *Physics Letters A*

Received date: 31 October 2017
Revised date: 3 January 2018
Accepted date: 24 January 2018

Please cite this article in press as: C.M. Barros Hito et al., Zeno effect in quantum Newton's cradle, *Phys. Lett. A* (2018), <https://doi.org/10.1016/j.physleta.2018.01.033>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A chain of quantum oscillators can behave similarly to Newton's cradle.
- Oscillators at the ends get entangled with negligible entanglement with inner ones.
- Crossover between different dynamical regimes is analysed.
- Zeno effect can be observed in this system.
